PROFESSIONAL SUMMARY

Full Stack Developer, Data Analyst, and Security Practitioner with enterprise-level delivery experience at AirNav Indonesia spanning software development, data analytics, QA, penetration testing, and infrastructure operations. Built and deployed production systems including an HRMS web application (Laravel 12, React, Docker, n8n, LLM integration) and an AI-powered face recognition attendance system under a freelance contract. As a data analyst, built machine learning models on operational flight data, simplified complex datasets for system integration, and communicated insights to stakeholders via dashboards and presentations — also acting as a technical liaison between non-IT stakeholders and the development team. Conducted QA scenario testing and penetration testing on internal systems, and managed deployment on Hostinger while developing CI/CD pipelines for self-hosted infrastructure. Proficient in React, Next.js, Angular, Laravel, Node.js, Python, TypeScript, PostgreSQL, MySQL, and Docker, with additional expertise in algorithmic trading systems (MetaTrader 5), multi-platform chatbot automation (WhatsApp, Telegram), multi-LLM agentic automation (Hermes, Claude Agentic, DeepSeek), and a 52-tool personal OSINT security framework.

WORK EXPERIENCE

Full Stack Web Developer — HRMS | AirNav Indonesia (Thesis Project) 2025 – Present

- Architected and delivered a complete Human Resource Management System using Laravel 12, React, ViteJS, MySQL, and Docker — covering employee management, attendance tracking, leave administration, and multi-role reporting modules
- Replaced a fully manual Excel-based workflow — previously requiring a full day of crosscheck per cycle, prone to data entry errors, inconsistent reporting, and no documentation of cross-shift handover work — with a centralized real-time dashboard, enabling instant monitoring and rapid notifications/updates across teams
- Containerized the full stack with Docker and secured public access via Cloudflare Tunnel, enabling zero-downtime production deployment without exposing internal network infrastructure
- Integrated n8n workflow automation to orchestrate HR notification pipelines (leave approvals, attendance alerts), replacing manual email coordination across departments
- Embedded LLM-powered reporting assistant enabling HR managers to query employee data and generate reports via natural language — reducing report generation time significantly
- Collaborated in a 3-person agile team using Git and GitHub with structured PR reviews, schema migrations, and REST API versioning across a 6+ month development cycle

Face Recognition Attendance Developer | AirNav Indonesia (Freelance) Dec 2025 – May 2026

- Engaged under a freelance contract with AirNav Indonesia to design and deploy an AI-powered employee attendance system using Python, computer vision, and face recognition to automate identity verification at entry points
- Designed the system as a security control to prevent attendance fraud (buddy punching/proxy check-ins), requiring live face recognition so only the physically present employee could record their own attendance
- Built real-time monitoring dashboards and integrated attendance records directly into company databases, eliminating manual reconciliation and reducing data entry errors
- Delivered end-to-end: model integration, backend REST API, dashboard UI, and database schema — fully production-deployed within the 6-month freelance contract timeline

Freelance Web Developer | UMKM Sablon (Custom Apparel Printing) Mar – Apr 2025

- Built a fully customisable apparel ordering platform using Angular and Ionic, allowing customers to configure and preview products interactively before checkout
- Implemented complete ordering pipeline with product catalogue management, order tracking, and admin panel — deployed live on Netlify with CI/CD via GitHub Actions
- Delivered a production-grade UMKM digital storefront enabling 24/7 self-service ordering, reducing owner manual order-taking overhead

Software Developer Intern | AirNav Indonesia

Feb 2025 – Feb 2026

- Contributed to development and maintenance of internal enterprise web applications across requirement analysis, implementation, testing, debugging, and staged deployment
- Participated in cross-functional engineering teams alongside senior developers; gained exposure to enterprise codebase management, stakeholder communication, and internal QA processes

Data Analyst & Technical Liaison Intern | AirNav Indonesia

Feb 2025 – Feb 2026

- Served as a technical liaison between non-IT stakeholders and the IT development division, translating business requirements into technical specifications for development and discussion sessions
- Built machine learning models using operational flight/aviation data to support analytical and reporting use cases
- Designed methods to convert complex operational datasets into simplified, easy-to-parse formats for system integration purposes
- Created dashboards and presentation materials (PPT) to communicate data insights to non-technical stakeholders in a clear, accessible format

QA & Penetration Testing Intern | AirNav Indonesia

Feb 2025 – Feb 2026

- Designed and executed structured QA test scenarios and testing protocols for internal enterprise applications, covering functional, regression, and integration testing
- Conducted penetration testing on internal systems following OWASP methodology to identify, document, and report security vulnerabilities
- Documented bug reports and security findings, and collaborated with developers to verify fixes and remediations prior to deployment

DevOps & Linux Infrastructure Engineer | AirNav Indonesia

Feb 2025 – Feb 2026

- Managed application deployment and release processes on Hostinger hosting infrastructure, handling server configuration, environment setup, and deployment workflows for internal applications
- Administered Ubuntu Linux production servers via SSH: package management, firewall configuration, user access control, log monitoring, and scheduled maintenance tasks
- Managed Git-based branching workflows and integrated deployment automation, enabling consistent, auditable software releases across the development lifecycle

PROJECTS

AI Agentic Automation System | Hermes · Claude Sonnet · DeepSeek 3.2

Ongoing

- Designed a multi-LLM agentic automation system integrating Hermes, Claude Sonnet (agentic mode), and DeepSeek 3.2 to handle complex automated workflows and decision-making tasks
- Orchestrated model routing and task delegation across multiple LLMs to balance cost, latency, and capability for different automation scenarios
- Deployed within self-hosted infrastructure to power business process automation for client and personal projects

Self-Hosted HomeLab & CI/CD Infrastructure (In Development) | Docker · n8n · CI/CD · Ubuntu Linux

Ongoing

- Building a self-hosted HomeLab environment to design and test CI/CD pipeline workflows for automated build, test, and deployment processes
- Designing infrastructure to support containerized services (Docker, n8n, Redis) with automated deployment pipelines for personal and client projects

Algorithmic Trading Bot (Live Production) | Python · MetaTrader 5 · Supply-Demand Strategy

- Built a live algorithmic trading bot integrated with MetaTrader 5 API for automated trade execution on XAUUSD and EURUSD currency pairs
- Implemented supply-demand zone detection with concavity-based confirmation as core signal strategy, combined with real-time risk management and dynamic position sizing
- System currently running live in production with real capital — real-world validation of strategy accuracy and execution reliability

Multi-Platform Chatbot Automation Suite | Python · n8n · WhatsApp API · Webhook · Fonnte 2025 – Present

- Deployed automated WhatsApp chatbot handling real-time messaging, user interaction routing, and business workflow automation for a live local business client
- Expanding platform to Telegram and website-embedded chatbot using shared modular conversation logic — unified multi-channel architecture across 3 platforms
- Built on n8n and webhook integration stack enabling non-developer operators to adjust automation flows without code changes

OSINT Custom Security Toolkit | Python · Linux · 52-tool Framework

Ongoing

- Built and maintain a personal OSINT framework comprising 52 integrated tools covering reconnaissance, target profiling, social media intelligence, domain/IP analysis, and data correlation
- Applied toolkit in real-world projects for attack surface mapping, information gathering, and threat intelligence reporting

AR-Based 3D Visualization App | Unity · C# · Augmented Reality

Jan 2024 – Jul 2024

- Developed an AR application using Unity and C# with marker-based detection (Binusian Card) to overlay interactive 3D models in physical space

Ordering & Inventory Management App | Ionic · Angular

Aug 2024 – 2025

- Built cross-platform ordering and inventory tracking application with 3D product preview and admin management capabilities

TECHNICAL SKILLS

Languages: Python, JavaScript, TypeScript, PHP, Java, C#

Frontend: React, Next.js, Angular, Vue.js, Tailwind CSS, HTML, CSS, Ionic

Backend: Laravel, Node.js, Express.js, FastAPI, Flask, REST API, Microservices

Database: MySQL, PostgreSQL, Redis, SQLite

Data Analysis & Reporting: Data Analysis, Machine Learning, Data Visualization, Dashboard Reporting, Stakeholder Presentations (PowerPoint), Requirements Translation

DevOps & Infrastructure: Docker, CI/CD, Ubuntu Linux, SSH, Git, GitHub, Cloudflare, Netlify, Hostinger, GitHub Actions

Automation & Integration: n8n, Webhook, Workflow Automation, LLM Integration, Process Orchestration, Fonnte

Chatbot: WhatsApp Bot, Telegram Bot, Multi-platform Chatbot Architecture

Security: OSINT (52-tool custom framework), Burp Suite, OWASP, Nmap, Wireshark, Metasploit, Penetration Testing, Malware Analysis

AI & Machine Learning: Face Recognition, Computer Vision, Machine Learning (Aviation Data), Algorithmic Trading (MT5), Prompt Engineering, Multi-LLM Agentic Automation (Hermes, Claude Agentic, DeepSeek)

Game & AR: Unity, C#, 3D Modeling, Augmented Reality

EDUCATION

Bachelor of Computer Science — Full Stack Development | Bina Nusantara University (BINUS) *Aug 2022 – Present*

Thursina International Islamic Boarding School (IIBS) | *International Class of Science*

Graduated 2022

CERTIFICATIONS & ACTIVITIES

Certifications: Certificate of Oral Presentation (ICCSCI), Certificate of Appreciation Authors (ICCSCI), Kaderisasi Staff Certificate

Organizations: ICCSCI MT Al-Khawarizmi — Committee Member, Digifest — Technician Committee
